

# Industrial

Commercial offices ■ Warehouse Extensions & New Build ■ Mezzanine Floors & Plant Platforms

We have the capability and experience to design in any structural material (but are not limited to), the following...

- Reinforced concrete
- Steel
- Masonry (brick, block, stone)
- Timber
- Aluminium
- Glass

Similarly, any type of structure including...

- Bridges
- Masts and towers
- Tanks and silos
- Retaining walls
- Building frames (low rise, high rise)
- Temporary works
- Building alterations
- Foundations
- Remedial works

Where appropriate CAD systems are employed to analyse structures in two and three dimensions. All design work is closely supervised and directed by our experienced Chartered Engineers. Output is in the form of written calculations and detailed working drawings.

Liaison with Architects and other professionals (where appointed) is an important part of the design process ensuring that a properly co-ordinated design is achieved. Building regulation applications are dealt with as a matter of course and, where appropriate. In the early stages of a project, feasibility studies, budget costings, and concept designs can be provided.

For a free initial consultation to discuss your project please telephone +44 (0) 1604 711707.
